A Refex Group of Companies

Enhanced Care. Delivered

PRODUCT PORTFOLIO

CARE. True to our name, we are dedicated to providing differentiating Healthcare solutions to shape a new paradigm in patient care. We strive to bring you innovative, differentiating, clinically meaningful MedTech solutions for a healthier tomorrow.

The MedTech group aims to unlock new possibilities and offer relevant technologies which will impact human lives positively. We bring you a comprehensive range of Made-in-India imaging diagnostics equipment, radiology accessories, digital technologies, and point-of-care solutions that can help improve better patient outcomes, enhance the reach of these solutions to the remotest parts of the country to improve quality of life.

Our core competencies in medical technologies along with your expertise in delivering care and combined experience will accelerate this mission and journey of CARE.

VISION

Touching every life through innovation in Healthcare.

MISSION

To ensure profitable operation through energizing leadership, good corporate governance, enhanced customer trust, innovative, efficient customer friendly process, mutually beneficial partnership with associates.

ISO 13485

Bureau of Indian Standards

Digitizing the X-ray World

We are focused on delivering best-in-class radiography systems which cater to a wide range of needs of healthcare providers.

With State-of-the-art, Caesium Iodide Flat Panel Detectors, electronics and in-house designed patient-friendly mechanics, our radiography systems deliver uncompromising clinical value, workflow efficiency, and patient comfort.

Modular design for increased patient throughput

High DQE for superior Image Quality

Designed for minimum footprint and maximum space optimization

Flexibility and versatility for a wide range of patient positioning

Advanced clinical software for various applications

DIGITAL RADIOGRAPHY

DReam CMT-Dual (ceiling type, dual detector)

Designed for high patient throughput and performance with improved workflow is critical. The dual detector system optimizes the workflow, fast acquisition of high-quality images, auto-tracking and auto-positioning reduce non-essential work steps, translating into higher performance.

- Rapid, high-quality image acquisition
- Ergonomic design for easy operation and high performance
- Synchronized detector stand and tube movement (optional)
- Automatic positioning for versatile applications
- Elevating horizontal table
- Bucky tilt offers upper extremity studies

DReam CMT -Single (ceiling type, single detector)

The 3-D ceiling mount DR suite is the perfect choice for moderate patient throughput, smaller rooms, stand-alone diagnostic centres, emergency care, and speciality hospitals. The DReam CMT single detector system is designed with extended freedom of movement for performing challenging clinical examinations.

- Tube mounted- auto tracking and positioning
- Fixed single detector for all positions
- High spatial resolution for best image quality
- Auto exposure and pre-set programs for faster throughput
- Vertical movement (motorized and manual) for ease of operations
- Optimized image processing software

DReam Floor-Mounted DR

- Patented designed Single/Dual Detector for upright and supine / prone patient positioning
- Floor rail tube stand for ease-of-use
- Auto Exposure settings and pre-set programs for faster patient throughput
- Superior image quality at lower doses
- Wired/wireless detectors

ADONIS HF X-ray Systems 300mA / 500mA / 600mA

ADONIS HF radiographic systems are the result of continuous R&D to serve healthcare providers with high-quality, affordable X-ray systems. The in-house designed and developed ADONIS High-Frequency generators use values only above 75% of voltages required to produce high contrast X-ray images while suppressing skin dose.

- Digital display of factors
- Tube focal spot selection switch
- APR-based control with 200 programs
- Motorized table (depending on the HF system)
- Motorized bucky with the option to accept all cassette sizes
- Automatic voltage compensation
- Microprocessor control tube overload protection
- Dual battery
- Automatic fall detector

ADONIS HF Mobile DR

Adonis HF mobile DR is a truly mobile digital radiography system that guarantees ultimate productivity. Being a lightweight and compact design, the mobile DR enables easy movements in ICUs, ERs, and operating rooms.

- Featherweight design - the panel is only 2.7 kg including, the battery
- Actuator-based motorized vertical movement with effective brakes
- Soft touch keypad with auto programmable features
- Detachable X-ray exposure release switch
- Dual battery
- Automatic fall detector

ADONIS 100HF/150HF Mobile X-ray

High-Frequency X-ray machines are powered to meet all Radiological needs at an affordable price. APR based High Frequency Inverter makes system precise and complete.

- Compact, light-weight, easily transportable (best suited for bed side X-ray)
- Actuator-based motorized vertical movement for easy mobility in all directions with effective braking
- Soft touch keypad with auto programmable features with the option to reprogram the settings.
- Microprocessor-based system with digital display of applied factors on LCD
- Detachable exposure release switch
- Automatic selection of bucky
- Horizontal table / semi-motorized table / floating top table / vertical bucky (optional items)

Smart Digital X-Ray

Mini 90 Point-of-care X-ray

Point-of-care Digital X-ray Imaging Solution. This lightweight, compact, portable design can be easily used where it matters the most, such as in point-of-care emergencies, homecare, accident sites, isolation wards, smaller clinics, disaster management sites, etc. MINI 90 at just 4.0 kg is the most versatile portable X-ray unit

- The only portable X-ray offering 2 mA to 10 mA range
- High penetration-40 kV to 90 KV
- Programmable exposure settings - ease of use during emergencies
- Field size of 43cm X 43cm at 100cms SID to cover a large area
- Smaller focal spot of 0.88mm,
- Bright 7 inch LCD touch screen display
- Remote switch for exposing
- Fully safer outer case
- The built-in Lithium-polymer batteries offer to use up to 150 exposure
- Low-dose, high-resolution images across wider clinical applications
- Perfectly designed four-leaf X-ray collimator to minimize scattered radiation to less than 4% of the permissible value
- New generation CSI flat panel detector
- 17"X17" and 14"X17", wired and wireless
- High DQE up to 84% for excellent image quality with 140-micron resolution
- Durable and robust to handle up to 150 kg of distributed load.
- Weight of approximately 3 kg only
- Advanced software technology for easy deployment
- Real-time logging and alarm of shock level in the event of any collision.
- Detector from a manufacturer with a huge production facility supplying detector layers to other major detector manufacturers.

ADONIS Flat Panel based C-Arm

The in-house designed and developed, made-in-India, the FPD C-Arm is an advanced solution to perform high end surgeries including Orthopaedics, Urology, Neurology, Gastrointestinal etc. The Caesium Iodide based FPD has been developed for highly detailed and low-dose diagnostic imaging. More efficient workflow with ADONIS TIALIC technology (Time-Independent Adaptive Low-dose Image Correction) offers low signal-to-noise ratios caused by insufficient high voltage power.

- Versatile design to perform various application
- Large FOV- active region of 23.6 X 23.6 cm (9.3 X 9.3”) for increased imaging area capacity
- Live image processing- Image rotation, invert, up to 32 frames, image flip/mirror, last image bosting time <50 secs, recursive temporal noise reduction
- On-screen display – 27” or 32” single monitors
- AI-enabled optimal dose indicator
- Image post-processing
- Remote control
- Easy patient data administration

ADONIS Mobile surgical C-Arm

The stationery Anode C-arm is a reliable choice for performing various surgeries in Orthopaedics, Urology, Neurology, Gastroenterology, etc.

- Ergonomically designed LCD control panel with user-friendly functions
- Dynamic Live Image, live image hold, pulsed mode
- Zoom, rotation, quad view etc
- Large image data storage capacity, both in frame-by-frame mode and in movie mode
- 10,000 image storage
- ADONIS GX software, cordless remote for processing and memory
- Dedicated video pipeline processor-based digital imaging
- Dynamic image quality for faster decisions
- Counterbalance mechanism, foot brakes, half turn locks for all movements

Mammography

The mammography systems are designed to provide best quality images and workflow efficiency to the radiologist and the technical team. Most importantly, our systems offer best-in-class experience for the patients.

PINKVIEW DR PLUS (Digital Mammography)

Pinkview Digital mammography comes with advanced high-resolution mammography detector suitable for excellent breast cancer digital images.

- All-in-one system and application of ASP function
- 75-micron pixel size high resolution for high-quality images
- Convenient digital pressure control using a microcomputer
- Application of SID 660mm for high sharpness
- Automatic standard positioning with a single-touch shooting
- Soft compression force control relieves pain during breast compression
- Display and control the set values on the main control unit and PC

PINKVIEW RT (Analog Mammography)

A convenient installation with All-in-one type product-wide and easy operation with full colour touch LCD

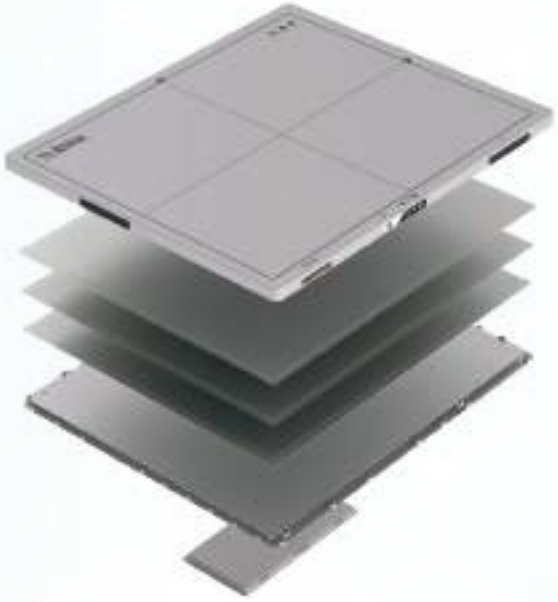
- Built generator in the slim body
- SID 660mm
- 7” touch LCD operation panel
- HF inverter system
- AEC (auto kV&mAs)
- Easy movement with 4 wheels
- Max tube current (100mA@25kV)
- Bucky device – 18 X 24cm

Flat Panel Detector

Spectral Detector

Reveal C, World First Spectral Detector to provide you with enhanced clinical advantages. This is the only portable dual-energy X-ray detector. It gives you the capability of energy separation allowing you to visualize the X-ray images and separately focus on either the soft-tissue or bone image.

- An ideal choice for ER, ICU, Paediatrics
- One Shot, 3 images- Normal DR, bone, and soft tissue
- Zero motion artefact
- Captures sharp images in a single exposure
- Ideal for line & tubes tips
- Calcium scoring capability
- Compatible with all existing HF X-ray



TRADITIONAL DR IMAGE

SOFT TISSUE IMAGE

BONE IMAGE

DReam Flat Panel Detector

- New generation glass-free flat panel detector
- 17 x 17 and 14 x 17 inches
- Wired and wireless
- High DQE for excellent image quality
- Durable and robust- handle up to 150 kg of distributed load
- Unprecedented weight of 2 kg
- Advanced software technology for easy deployment

Radiography

Dental

Dynamic

Vet

Retrofit Mammography Panel

World's first slim cassette type Digital Mammography upgrade solution designed by radiologists for optimum user experience.

- 18x24C and 24x30C for easy digitization and premium mammography performance
- 76 microns (smallest in CSI) for excellent image quality
- High DQE/ low noise
- Effective workflow enhanced
- Lowest-cost DR mammography solution
- Mobile application

L MLO

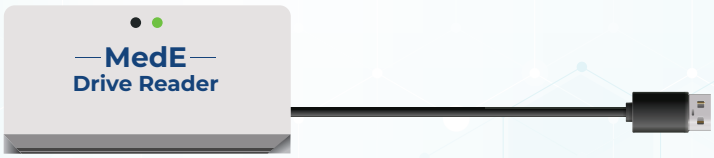
Imaging Accessories

We bring you a range of cutting-edge imaging accessories to enhance your clinical outcomes. High-resolution image display solutions to digitization to the world's only of kind chip-based patient data storage device, the technologies offer complete support for healthcare providers.

MedE Drive for patient data storage

Presenting first of its kind chip-based digital health cards for all types of health records in a single device. The MedE Drive digital card stores DICOM images, Laboratory reports, ECG, TMT, prescriptions, and discharge summary etc., MedE Driver card is an ideal solution to carry all heath data anywhere. The MedE Drive card can be viewed by any doctor anywhere at any time on a desktop computer, laptop, Mac, and also an Android mobile phone.

- 32 GB storage capacity
- 100% archival guaranteed
- One card-a patient for lifetime
- Write protection to avoid data tampering
- Personalized card with patient details printed on the card
- Easy to carry anywhere



MED-TAB

World's first DICOM-calibrated radiology workstation for portable medical analysis.

- Hardware 11-bit DICOM grayscale calibration-a world first
- 113.3" display screen
- >300cd/m2 brightness
- 2MP high-resolution anti-glare display
- Wireless/wired keyboard and/or mouse connector
- DICOM Part 14 GSDF compliant
- Use anywhere in the hospital/home
- Battery or mains operation

Image Display Monitors

We bring you a comprehensive range of Radiology and OT/ scope display monitors for accurate display of monochrome and colour images. The USFDA/ CE-certified display monitors support diagnostic requirements.

Enhanced images for easy viewing

High brightness to meet performance standards

Multi-monitor configuration

Maintain image quality over time

Backlight stabilization, ambient sensor, QA software

DMD D 2000, X-Ray Film Digitizer

The medical grade x-ray film digitizer supports your aim to convert the conventional radiographic film into digital form for comparison and storage in digital file format. DMD D 2000 offers Lossless scanned images due to a very high gamma range of 4.0 & maintains quality.

- Easy to scan all sizes of X-ray films
- High quality mammography scan
- Scan time- 8 secs for 14 x17 film
- Support data format- DCM, BMP, JPEG
- Slim data size (max 3.3MB /200dpi)
- One-click scans with auto-sizing
- Brightness control for each X-ray film
- Various support for PACS viewer

CT/MR/Mammograph multi-modality workstations

- Images can be viewed on a single station
- Vendor-neutral, independent of equipment manufacturer
- Access the current and prior studies for direct comparison
- Customized hanging protocols
- A large set of dedicated tools
- 2D/3D CAD support

CD/DVD Publishers

We bring you, varied models of DICOM images published in, a media (CD/DVD/Blu-ray) suitable for the hospital and centre use.

- DICOM calibrated publishers
- Easy to integrate with any PACS
- Auto-labelling, printing and storage of DICOM images
- Auto-pick of CD or DVD based on file size

Pre-owned 1.5 Tesla and 3.0 Tesla MRI

Your strong partner for holistic MRI solutions, including comprehensive services!

Magnetic resonance imaging (MRI) is one of the safe, gentle and constantly developing diagnostic procedures in radiology. With the help of a strong magnetic field and radio waves, this cross-sectional imaging method enables detailed images of almost all parts of the body. Healthcare providers need powerful and modern solutions for such precise measuring methods. CURA with PROMED Germany helps you obtain used MRI systems from Philips, with the latest options and software, depending on your application requirements. Our equipment meets the latest technical standards and provides financially attractive access to diagnostic and imaging services.

We provide comprehensive advice and work with you to find the ideal MRI solution for you from sales and installation to commissioning at the customer's site. Spare parts as well as a comprehensive service offer are also part of our range of services.
